I am currently studying Frontend Development at Noroff School of Technology and Digital Media and have a Bachelor's degree in Digital Marketing from Kristiania University College.

I've always enjoyed working on creative projects, whether that is content creation or web development. What I like about frontend development is that it combines creativity with problem-solving. There is something satisfying about turning an idea or design into a working website that people can actually use.

During my internship at Kristiania University College, I worked with content creation for the university's website. I planned, filmed, edited and published videos, while also gaining experience with technical SEO and content optimisation. This gave me a better understanding of how content, design and technology work together online.

As part of my frontend studies, I have built several projects using HTML, CSS and JavaScript. These include an e-commerce website, a responsive museum website and my personal portfolio website. Through these projects I have learned a lot about responsive design, accessibility, API integration and GitHub. More importantly, I have learned how to stay patient when things do not work the first time and how to solve problems by breaking them down into smaller steps.

Outside of development, I have worked as an eSports coach for children and teenagers. That experience taught me a lot about communication, responsibility and creating an environment where people feel included and supported.

I am now looking for opportunities where I can continue learning, gain industry experience and contribute to real projects. I enjoy building websites, learning new skills and challenging myself, and I am excited to take the next step in my career as a frontend developer.

Thank you for taking the time to read my application. I would be happy to discuss my background and experience further.

Best regards,

Remi Ytterdahl
